

# **Fuel flow meters**

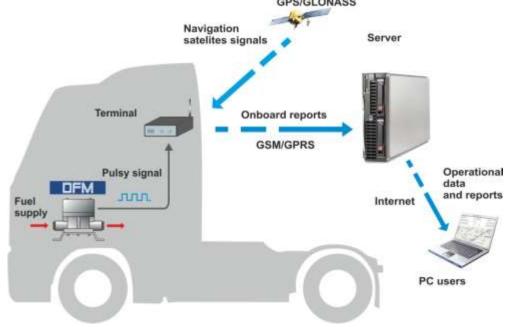

www.wagencontrol.eu

## Precise fuel monitoring device

- precise fuel monitoring tool. Inline fuel meter DFM can be applied for fuel accounting both autonomously and as a part of vehicle tracking and fuel monitoring system.

Instant fuel consumption rate can be accurately measured only with direct measurement method. That's why using DFM flow meter is the best solution for fuel consumption monitoring.

# What is the purpose of DFM and what type of applications is it used on?

### Fuel flow meter DFM allows to solve the following tasks:

engine time running control;

fuel consumption rationing;

- fuel theft detecting and preventing;
- fuel consumption optimization and real-time monitoring;
- fuel consumption control of modernized engines.

### Features of DFM

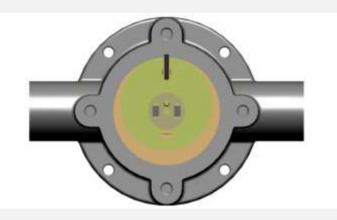

- protection against unauthorized interference and tampering with the meter;
- resistant to vibration and hydraulic impacts;
- ▶big in-built mud filter;
- meets road standards of electromagnetic compatibility, mechanical and climatic influences;
- durable and precise measurement zinc-aluminum chamber;
- full set of mounting accessories;
- ➤ all the fuel flow meters DFM are tested on the metrologically certified installation when produced at the factory;
- corresponds to local and europian automakers' standards;
- technical support.

# **DFM** operating principle

DFMs refer to devices of direct volumetric measurement of the fuel consumption with ring-type measurement chambers.

The principle of DFM operation is based on measuring fuel volume that passes through a measurement chamber. Under pressure of the fluid flowing through the fuel flow meter inlet nozzle to the inlet of the measuring chamber, the ring slides along the inner surface of the chamber and it also slides along the web. The ring pushes the fluid inside and outside the chamber out through the outlet into the outlet nozzle.

One turn of the ring pushes out the volume of fluid equal to the volume of the chamber. At the same time the electronic board of the DFM makes one outlet pulse.

## **DFM** modifications

### Differential fuel flow meter

## Autonomous fuel flow meter with display (fuel counter)

### **DFM D**

(external power supply, normalized pulse)

#### **DFM B**

self-powered (autonomous power supply), standard functionality

#### **DFM C**

self-powered (autonomous power supply), advanced functionality

## Fuel flow meter with pulse interface and display

### Fuel flow meter with pulse interface

**DFM CK** 

(combined power supply, normalized pulse, advanced functionality)

#### **DFM AP**

(external power supply, non-normalized pulse)

#### **DFM AK**

(combined power supply, normalized pulse)

<b>©</b>	Measuring instrument type approval certificate (Russian Federation)
PCF AI 177	Technical regulation of safety certification (Russian Federation)
PG HO06	Use permit of explosion proof fuel flow sensors
<b>(III)</b>	EMC & safety conformity certification (Belarus)
Tudh ISO 2001-2009 milks	The certificate of conformity o STB ISO 9001-2009

# Which fluids can be measured by DFM flow meter?

# Fuel flow meter DFM can be used for consumption measuring of the following fluids:

- ▶Diesel fuel (GOST 305, STB 1658);
- Furnace oil (GOST 10585);
- >Fuel oil (GOST 10585, STB 1906);
- ➤ Motor fuel (GOST 1667);
- Admiralty and furnace fuel oil (GOST 10585);
- ▶Biofuel (GOST R 52808, STB 1658);
- ➤Other liquid fuels and mineral oil with kinematic viscosity of 1.5 to 6 mm²/s.

## Measurement scope and accuracy

Model	Start-up consumption, I/h	MIN flow rate, l/h	MAX flow rate, I/h	Inaccuracy, ±%
DFM 50AK DFM 50B DFM 50C DFM 50CK		1	50	±1
DFM 90AP	0,5	3	90	±2
DFM 100AK DFM 100B DFM 100C DFM 100CK		2	100	±1
DFM 220AP		8	220	±2
DFM 250AK DFM 250B DFM 250C DFM 250CK	2	5	250	. 1

DFM 100D	0,5*	10*	100*	
DFM 250D	2*	25*	250*	±3
DFM 500D	5*	100*	500*	

Consumption in each chamber .

### Selection of DFM model depending on the engine power (boiler output). Direct measurement.

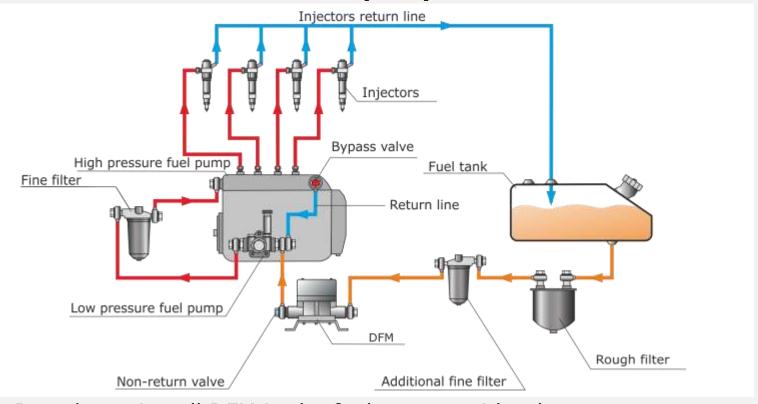

Engine power, kW	Boiler output, kW	Recommended models of fuel meters
up to 80	up to 400	DFM 50B, DFM 50C, DFM 50AK, DFM 50CK
80 - 150	400 - 800	DFM 90AP, DFM 100B, DFM 100C, DFM 100AK, DFM 100CK
150 - 300	800 - 1500	DFM 220AP, DFM 250B, DFM 250C, DFM 250AK, DFM 250CK
300 - 600	1500 - 3500	DFM 500C, DFM 500AK, DFM 500CK

# Examples of DFM installation schemes into engine fuel system. Direct measurement.

### 1) DFM installation scheme "Before pump"

In order to install DFM in the fuel system with a low pressure fuel pump according to this scheme, it is necessary to use the line between the rough filter and the low pressure fuel pump input.

# Selection of differential DFM. Differential measurement.

Differential fuel meter DFM is used to measure the fuel consumption of vehicles, where it is not possible to apply the single-chamber diesel meter and the installation scheme with the return fuel line ringing.

A differential fuel flow meter calculates fuel consumption as the difference of the fuel flows of the supply and return fuel lines. Vehicle fuel consumption information is sent to the pulse output.

Maximum and minimum fuel flow values in supply and return lines of the engine can be found in the performance specification of the booster pump of the engine mounted on the vehicle.

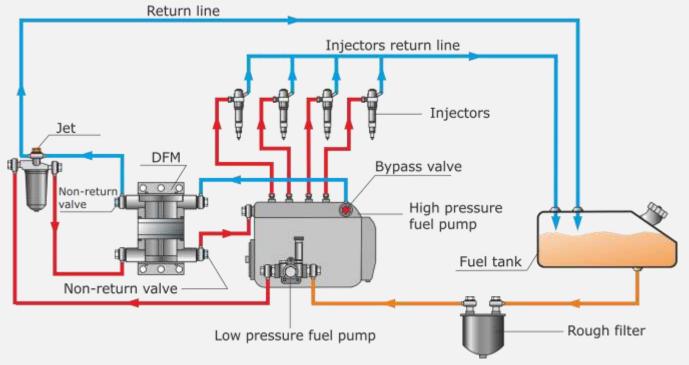

Minimum consumption, I/h	Maximum consumption, I/h	Recommended differential fuel flow meters
10	100	DFM 100D
25	250	DFM 250D
100	500	DFM 500D

# Examples of DFM installation into the fuel line of a vehicle. Differential measurement

### 1) Installation of the forward chamber of differential DFM "After the Pump" scheme

Forward-flow chamber of differential DFM is to be installed in the gap of supply fuel line of the engine, after LPP/ Return-flow chamber is to be installed in the gap of the return line between HPP outlet and fuel tank.

### Example of data, obtained from **DFM**

Fuel meter DFM enables to receive objective information about actual fuel consumption and vehicle working time. It also permits to reduce fuel and repairing costs. It is possible to develop fuel consumption rates for selected routes and technological operations. Analyzing instant fuel consumption graph allows:

- To detect fuel theft;
- Engine failures leading to increasing of fuel consumption;
  - To analyze driver's bihaviour.

### **Customer feedback**

- Fuel meter DFM enables to receive objective information about actual fuel consumption and vehicle working time. It also permits to reduce fuel and repairing costs. It is possible to develop fuel consumption rates for selected routes and technological operations.
- The economic effect of using the fuel accounting devices is different at various companies, usually about 10 to 40%, depending on the baseline situation and management persistence.

### Findings of independent experts

Installing DFM on vehicles DOES NOT affect:

- engine parts damaging;
- electrical components damaging.
